

TOTAL PROTECTION – TOTAL SAVINGS

What our Clients Say:

High Tech Manufacturing – “Our site projects the return on investment (ROI) was less than 2 months after completing the installation of the 3 level surge suppression system. This meant that we saved millions of dollars in losses.”

Major Hospital System – “In the past, we had installed a few different manufacturers’ surge suppression units, and although there was some reduction in lightning damage, there seemed to be no effect on the daily nuisance problems experienced by our sensitive (and very expensive) electronic equipment in the hospital....the results of installing the TPS units include reduced downtime, clearer ultrasound images, no lightning damage whatsoever....Our payback period is less than one year.”

Municipal/Government – “The result was lower maintenance costs. We feel this technology will allow us to achieve significant short and long term savings, increase reliability and longevity of all our electrical & electronic equipment throughout the county.”

Retail – “We had more electrical problems at that store than any other. Not only was it a cost savings on maintenance, but the down time and loss of sales were virtually eliminated.”

Residential - “...all her neighbors TV’s & computers were affected by a large surge. My client’s very expensive computers were not affected, the only house on the street! I have vowed never to leave a homeowner without the option of adding surge protection.” Finan Electric

Total Protection Solutions

The Green & Sustainable TPS Story:

SUCCESSFUL COMPANIES have placed a priority on **GREEN AND SUSTAINABLE** goals. They have corporate mandates to apply environmental and system efficiency improvements in their facilities.

The Total Protection System generates amazing financial rewards. These savings are the “low hanging fruit” in the world of power quality. Supported by an **Unconditional 30 Year Free Replacement Warranty**, Total Protection Solutions have a very low initial investment. The **short payback** and a **30 year plus life cycle savings** are a winning combination.

Clients have documented paybacks of less than two years. Operating costs have been reduced while providing protection from catastrophic failure and downtime. The return on investment (ROI) is many times the initial cost. Isn't this the exact goal of facility managers?

TOTAL PROTECTION FOR LIFE®

Reduce Your Bottom Line With:

- ✓ Reduced Operating Costs
- ✓ Increased Productivity
- ✓ Increased System Reliability
- ✓ Reduced Failure & Downtime
- ✓ System Wide Total Protection
- ✓ Low Cost to Benefit Ratio
- ✓ Significant Long Term Savings
- ✓ Extended Equipment Life
- ✓ 30 Year Warranty

TPS will help get maximum life from all electronic and electrical equipment. Premature failure of light bulbs, ballasts and other e-waste add to landfill loading. Even traditional electric appliances (e.g. motors, pumps, televisions) last longer with TPS protection.

Real solutions are achieved with a proactive approach, focusing on return-on-investment and maximizing life-cycle savings. Do not accept first cost, low bid or generic solutions. The “lowest bid” will use inexpensive components that meet minimum standards. Quality and performance are sacrificed and the customer is unaware that they are not well protected. TPS products are designed for the very best performance, reliability and longevity available. Ask about the Enhanced Transient Filter. This TPS feature shows a return-on-investment that generic products will not achieve.

The TPS management team delivers over 23 years of hands-on field experience. Customer relationships are held in high regard. Excellent service and support is our goal.

Let TPS help save your company money.
